

Forty years experience, leader in the production of traditional woodworking machines. The internally managed production allows to perform all types of work from the machine in series to custom production. The control of each passage ensures the proper functioning of the machinery and the attention to the detail.

AD530

HIGH QUALITY FINISH IN A LIMITED SPACE

AD530

The large sized thickening tables, made entirely in ribbed cast iron, with simultaneous electrical raising together with the extreme reliability of the planing feed, ensure an excellent level of finish on the being processed piece.

SIMPLE AND ACCURATE MEASUREMENT READING

The digital reader, electronic, for positioning the thickening table allow rapid and precise reading.

INVERTER REGULATION WOOD SPEED

Wood advance regulation with inverter from 3 to 15 mt/min

ROLLERS ON THE THICKNESSER TABLE

The thickener table can be equipped with two adjustable idle rollers or with a motorized floating outfeed roller to guarantee a safe feed even under the worst working conditions.

RAISING THE THICKENING TABLE

The electrical system of raising the thickening table is quick and accurate with decimally adjusted impulse and electronic readout supplied as standard. The thickening table is raised by 4 screws with double fixings to increase stability and to enhance the level of finish on the work piece at maximum feed rates.

QUICK AND PRECISE CHANGEVER FROM SURFACE PLANING TO THICKENING

Quick changeover, it takes just a few seconds to move from surface planing to thickening or vice versa, thanks to:

- simultaneous and electrical raising of the surfacing tables;
- easy positioning of the safety guards that protect the shaft
- a single extractor hood for both surfacing and thickening.

PLANER FENCE

The planer fence is a large anodized aluminium extrusion. Fence tilting is fast and easy thanks to a solid and reliable handle. The tilting locking/unlocking lever is very quick. Tilting precision is guaranteed by a graduated scale and reference stops at 0° and 45°.

ROLLER IN SECTIONS

The toothed roller in sections increases the pulling potential, allowing several pieces of different thickness to be fed through at the same time.

SPIRAL PLANER SHAFT
